

# Case Studies

## St Catherine's Walk Shopping Centre

LITE's creative flair and sustainable approach exceeded customer expectations by utilizing some of their existing main feature display stock by using fully programmable DMX controlled miniled lighting.

This solution enabled the feature displays to change colour matching specific client themes which wowed and engaged the visitors to the Centre.

The ability to change colour added a new dimension to their Christmas Light display for 2019 and the flexibility to change the colours going forward enables trending colours to be matched for 2020 and beyond.

All delivered and installed on time and on budget.
